EDUCATION

University of Florida – Gainesville, FL

Graduation: December 2026

Bachelor of Science in Computer Science

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Information and Database Systems, Linear Algebra, Artificial Intelligence Fundamentals, Discrete Structures, Programming Language Concepts
- Certificates: UF AI Fundamentals & Applications, Azure AI Fundamentals (AI-900), Azure Fundamentals (AZ-900)

RELEVANT EXPERIENCE

Software Engineering Intern

May 2026 – Present

ADT (Security Technology) – Boca Raton, FL

- Designed an AI-powered emergency dispatch verification concept to reduce false alarms and unnecessary emergency responses, presenting the solution to business stakeholders and senior leadership.
- Applied Cursor, Claude, and MCP-based AI tooling to analyze a large enterprise Salesforce codebase, accelerate code navigation, support Apex optimization, and streamline complex development workflows.
- Consolidated Salesforce metadata to proactively address platform limits and remove redundant records.
- Supported ML model training and validation for Origin AI's Wi-Fi sensing platform through movement testing.

Software Engineering Co-op, R&D

January 2026 – May 2026

Hunter Engineering Company (Automotive Equipment) – St. Louis, MO

- Designed a secure C#/.NET and Blazor factory-reset workflow integrated with Azure IoT Hub and IoT Edge/EFLOW, enabling API-driven deregistration and re-provisioning across 100,000+ Hunter devices worldwide.
- Investigated and resolved asynchronous execution and concurrency issues, including race conditions and null reference scenarios, to improve runtime stability and reliability during installation and setup workflows.
- Modernized unit testing infrastructure by migrating from Moq to NSubstitute within a large C#/.NET enterprise codebase, improving test isolation and maintainability while removing Moq-specific security and privacy risks.

Software Engineering Intern

May 2025 – November 2025

JM Family Enterprises (Toyota/Lexus Automotive Group) – Deerfield Beach, FL

- Architected an Azure Functions (.NET/C#) identity-validation workflow integrating Microsoft Graph, Salesforce, and MuleSoft to compare access fields, detect policy inconsistencies, and generate exception reports.
- Engineered a C#/.NET backend querying Azure Application Insights via REST API, processing 100k+ service events to analyze service activity for JM Lexus and Toyota dealership systems, with safeguards against race conditions.
- Supported GPT-based agent initiatives using MCP and RAG to surface insights from enterprise event data.

Software Engineering Intern

June 2024 – August 2024

Toyota (Southeast Toyota Distributors) – Jacksonville, FL

- Built a Python automation to transfer 1,000+ files from Blob Storage to SharePoint, saving 350+ hours annually.
- Developed SQL queries to analyze tire data for over 51,000+ Toyota/Lexus vehicles from Amazon RDS, generating 21+ reports, reducing warranty claims by 20% and saving over \$150k by preventing costly tire package recalls.

AI Cybersecurity Researcher

May 2023 – May 2024

Florida Institute for Cybersecurity Research – Gainesville, FL

Software Engineering Intern

March 2022 – January 2023

Robotics For All (STEM Education) – Palo Alto, CA

RELEVANT PROJECTS

BetAI Sports Analytics Platform

August 2026 – Present

Contributor – University of Florida

- Building an AI sports analytics platform using ML models to predict NFL outcomes and backtest performance.

SKILLS

- **Languages**: C#, Python, C, C++, Java, JavaScript, Apex, R, SQL, DAX, Power Query, VBA, ARM Assembly
- **Technologies**: .NET, Azure, Git, Docker, DevOps (CI/CD), Jira, MCP, Generative AI, Claude, Cursor, Containers, SIEM, REST API, Amazon RDS, Cosmos DB, Salesforce, Microsoft Graph, LLMs, RAGs, AI agents, SonarQube
