EDUCATION

University of Florida – Gainesville, FL

Graduation: December 2026

Bachelor of Science in Computer Science

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Information and Database Systems, Linear Algebra, Artificial Intelligence Fundamentals, Discrete Structures, Programming Language Concepts
- Certificates: Microsoft Azure Fundamentals, Microsoft Technology Associate, AI Fundamentals & Applications

RELEVANT EXPERIENCE

Software Engineering Co-op, R&D

January 2026 – Present

Hunter Engineering Company – St. Louis, MO

- Driving development and refinement of a critical, distributed installation and provisioning library used to configure new ADAS and wheel alignment equipment, including direct edits to production C#/.NET source code.
- Investigating and resolving asynchronous execution issues, including race conditions and potential null reference scenarios, to improve runtime stability and reliability during installation and setup workflows.
- Modernizing unit testing infrastructure by migrating from Moq to NSubstitute within a large C#/.NET enterprise codebase, improving test isolation and maintainability while removing Moq-specific security and privacy risks.

Software Engineering Intern

May 2025 – November 2025

JM Family Enterprises – Deerfield Beach, FL

- Built a C#/.NET backend that queries Azure Application Insights via REST API, parses logs from over 100k service events, and outputs actionable telemetry for an interface monitoring vehicle service operations across JM Lexus and Toyota dealerships, implementing reliable safeguards against race conditions in periodic data refresh cycles.
- Designed an identity-validation workflow using Azure Function Apps (.NET/C#) that queries Microsoft Entra through Microsoft Graph API and retrieves Salesforce data via a MuleSoft proxy, performing field-level comparisons, detecting access-policy inconsistencies, and outputting clear exception reports for the team to review.
- Supported AI Foundry initiatives using Model Context Protocol (MCP) to develop GPT-based agents with Retrieval-Augmented Generation (RAG) pipelines that surfaced insights from JM Lexus and enterprise event data.

Software Engineering Intern

June 2024 – August 2024

Toyota (Southeast Toyota Distributors) – Jacksonville, FL

- Engineered a Python solution using Azure SDK and REST API to extract 1,000+ URLs from Azure Blob Storage, retrieve files, and upload them to SharePoint, streamlining document management and saving 350+ hours annually.
- Developed SQL queries to analyze tire data for over 51,000+ Toyota/Lexus vehicles from Amazon RDS, generating 21+ reports, reducing warranty claims by 20% and saving over \$150k by preventing costly tire package recalls.
- Architected a custom 14-parameter entry form aligned with Toyota Motor North America (TMNA) standards, automating team-charter population via VBA, and built a Power BI dashboard, reducing entry time by 500%.

AI Cybersecurity Researcher

May 2023 – May 2024

Florida Institute for Cybersecurity Research – Gainesville, FL

- Conducted research on LLM security, evaluating vulnerabilities through adversarial testing and mitigation analysis.

Software Engineering Intern

March 2022 – January 2023

Robotics For All – Palo Alto, CA

RELEVANT PROJECTS

Vehicle Fatality Analysis Dashboard

November 2024 – January 2025

Contributor – University of Florida

- Built a full-stack web app using React, C++, and Chart.js to ingest, process, and visualize 26 years of NHTSA crash fatality data by make/model, enabling instant trend comparisons and interactive insights across 500+ vehicle models.

SKILLS

- **Languages**: C#, Python, C, C++, Java, JavaScript, Apex, R, SQL, DAX, Power Query, VBA, ARM Assembly
- **Technologies**: .NET, Microsoft Azure, JetBrains IDEs, Git, Power BI, GDB, Docker, Azure DevOps (CI/CD), MCP, Node.js, JSON, JWT, Oracle, Pandas, REST API, Amazon RDS, Cosmos DB, Salesforce, Microsoft Graph, React.js
